1 Introduction

Drive Tree is designed to connect student drivers with verified driving instructors in an easy, secure, and transparent way. The document explains the purpose, scope, stakeholders, system features, and constraints. It helps our team stay on the same page during Sprint 1 and sets the foundation for future development.

1.1 Purpose

This document will be used by our project team and professor to understand what the system should achieve and why it is being built. This ensures that all stakeholders share the same understanding of the project's goals.

1.2 Scope

Drive Tree will allow students to search for verified driving instructors, book lessons, leave honest reviews after each class, and access learning resources such as mock tests and driving rule videos. It also provides an admin panel for verifying instructors and managing reviews. In the future, features like ads and sponsorship will be added.

1.2.1 In Scope

- Student registration and login
- Instructor registration with document upload for verification
- Admin approval/rejection of instructor accounts
- Search and filter instructors by location, price, language and rating
- Booking system
- Student reviews after completed lessons
- Mock test area (quiz format)
- Learning hub with tips and videos

1.2.2 Out of Scope

- Payment and commission handling

- Mobile app development
- Ads and sponsored placements for instructors
- Integration with government databases for automatic license verification

1.3 Definitions, Acronyms, and Abbreviations

Term	Explanation
MVP	The first working version of the app with only the most important features, used for testing and feedback.
RBAC	A security method where different roles (student, instructor, admin) have different levels of access.
UI	The visible part of the application that users interact with, such as buttons, forms, and menus.
UX	How easy, smooth, and satisfying it feels for a user to use the application.
JWT	A secure way to transmit user authentication information between the frontend and backend.
API	A set of rules that lets the frontend and backend communicate with each other.
CRUD	The four basic operations for managing data in a system.
Stripe	A popular online payment system that will be used in later sprints for handling lesson payments. (Future based)
Verification	The process of checking that driving instructors are licensed and legitimate before approving them on the platform.
Mock Test	A practice test that simulates the official driving theory exam to help students prepare.

2 Positioning

2.1 Business Opportunity

Many students struggle to find trustworthy driving instructors and waste time searching different websites. Existing platforms don't focus on verified instructors or per-class reviews. Drive Tree fills this gap by centralizing bookings, reviews, and learning resources in one secure web app.

2.2 Problem Statement

The Problem of	Students not being able to easily find verified and trustworthy driving instructors.
affects	Student drivers, instructors, and driving schools.
the impact of which is	Students risk booking fake or low-quality instructors; instructors struggle to find consistent students.
a successful solution would be	Provide verified instructors, transparent reviews, booking management, and driving test preparation.

Table 1 Problem Statement

2.3 Product Position Statement

For	Student drivers
Who	Need verified instructors, easy bookings, and learning resources
The Drive Tree	Is a web application for connecting students and instructors
That	Ensures verified instructors, honest reviews, and study materials
Unlike	General classified ads or social media posts
Our product	Provides trust, structure, and integrated tools in one platform

Table 2 Product Position Statement

2.4 SWOT Analysis

<Reference: <https://www.businessballs.com/strategy-innovation/swot-analysis/>>

Strengths	Weaknesses
------------------	-------------------

Secure verification per-class reviews integrated learning tools.	Payment system not included in Sprint 1 requires admin oversight for verification.
Opportunities	Threats
Add sponsored ads	Competition from established tutoring/learning apps
expand to mobile app	possible fake documents from instructors.
partner with driving schools.	

3 Stakeholder and User Descriptions

3.1 Stakeholder Summary

Stakeholder Name	Represents	Role
Students	Individuals preparing for driving tests	They will use the app to find instructors, book lessons, leave reviews, and access study resources.
Instructors	Licensed driving instructors	They will register on the platform, upload verification documents, manage their availability, and receive student bookings.
Admin	Drive Tree platform owner/managers	They will verify instructor documents, approve/reject applications, monitor reviews, and ensure the system runs securely.
Driving Schools (Future)	Groups of multiple instructors	In later phases, they can promote their instructors, advertise, and manage bookings for their business.

Table 3 Stakeholder Summary

3.2 User Summary

User Name	Description	Responsibilities	Stakeholder
Student User	New driver using app	Register, book, pay (future), review, take mock tests	Students
Instructors User	Licensed instructor	Register, upload license/certification documents, manage schedule, provide lessons, respond to reviews	Instructors

Admin User	Platform admin	Verify instructors, approve/reject, monitor system	Admin
------------	----------------	--	-------

Table 4 User Summary

4 Stakeholder Requirements

ID	Requirement	Stakeholder
R1	Students can search and book instructors	Students
R2	Instructors can upload license and documents for verification	Instructors
R3	Admin can verify and approve instructors	Admin
R4	Students can leave reviews only after a completed lesson	Students
R5	Students can access mock tests and driving tips	Students

Table 5 Stakeholder Requirements

5 System Features

ID	Feature	Stakeholder Requirement ID
F1	Secure student and instructor login	R1, R2
F2	Instructor verification flow	R2, R3
F3	Instructor search and profile view	R1
F4	Booking system	R1
F5	Review system tied to completed bookings	R4
F6	Mock tests and learning hub	R5
F7	Learning resources (tips & videos)	R5
F8	Admin dashboard for verification & monitoring	R3

Table 6 System Features

6 Assumptions

- Students and instructors will have internet access and modern browsers.
- Admins will manually verify instructors in MVP.
- Stripe or similar payment systems will be added in later phases.
- The project will be developed using React (frontend) and Node.js/Express (backend).

7 Constraints

- Limited to web application only in Sprint 1.
- Time frame restricted to course deadlines.
- No government database integration for ID verification in MVP.
- Cloud services (e.g., MongoDB Atlas, file storage) must fit free/education tier.
